

One service domain. One prioritized AI roadmap. One day.

Individual AI features are not enough to assess the potential of an entire service domain.

The proxia AI Opportunity Workshop provides clarity in just one day on where AI can deliver the greatest value in your service organization, which use cases should be prioritized, and what can be configured with SAP Business AI or requires custom development.

Your results after one day

You do not receive a general collection of ideas, but an evaluated and actionable AI roadmap for your selected service domain.

Afterwards, you will know:

- which AI use cases promise the greatest business value
- which roles, processes and pain points are particularly relevant
- which data and system boundaries need to be considered
- which ideas can be configured and which require custom development

From AI ideas to an actionable roadmap

We take an end-to-end view of your service domain – for example, customer service, field service, maintenance, spare parts or service management.

1 Understand

We capture the processes, roles, systems and most important pain points within your domain.

2 Identify

Together, we develop relevant AI use cases and assess the data and system boundaries required to implement them.

3 Evaluate

The most promising ideas are prioritized based on business value and effort and clearly categorized:

SAP Business AI – activate or configure

Agent Development – develop individually

4 Plan

The prioritized use cases are brought together in a concrete roadmap with responsibilities and clearly defined next steps.

What you take away

- Prioritized AI use cases for your service domain
- Clear decision: configure or develop
- At least two fully developed to-be use cases
- Sequenced roadmap with concrete next steps

Part of the proaxia AI Discovery Series

The AI Opportunity Workshop builds on the Business AI Reality Check and provides the foundation for the subsequent Design Workshop, where selected use cases are further defined from both a business and technical perspective.

Develop your AI roadmap now

The workshop is available at a fixed price of EUR 4,500.*

* Excluding VAT and travel expenses
